Today we bring you more gear news and information from Outdoor Retailer Winter Market 2009, this time in electronics.

Timex Expedition WS4

Call it an "adventure instrument," wrist top computer, or watch, the WS4 is distinguished by its widescreen display (approximately 1 5/16"), which features altimeter (range: -1,312 to 29,520 feet), barometer (range: 300 to 1,100 mbar), thermometer (range: 14° to 122° F), and compass measurements. (The WS4 stands for wide screen, four functions.)

Developed with the help of alpinist Conrad Anker who tested it in the Himalayas, the WS4 easily toggles between functions, even with mitts on up high, is water resistant to 50 meters, has a chronograph, alarm, timer, and night-mode setting for low-light conditions, and is available with a rubber or elastic strap in six color combos.

Weight: 90 g

Display Dimensions: 38 mm x 25 mm

Case Dimensions: 50 mm x 40 mm

MSRP: \$199.95

Limited availability starting February 2009, available worldwide in May.
